Model MWB Wireline Set Bridge Plug - MWB Top Set

Model MWB Wireline Set Bridge Plugs are compact, small OD and designed for easy drill out. These Bridge Plugs will set securely in all standard harness casing. A ratchet lock ring stores the setting force in the plug. The one piece packing element and metal back up rings combine for a superior seal. The case hardened, one piece slips virtually eliminate premature setting, yet can be easily drilled out. They are available for 2 3/4" through 20" casing.

Features:

- Sets securely in all standard hardness casing
- Ratchet lock rings secure dynamic setting force
- One piece packing element and metal back up rings combine for a superior seal
- Compact, easy running
- Can be set directly with Baker wireline setting tools
- Shear studs are Baker style and connect directly to the Baker Adjuster Sub

*Please contact sales to inquire about high temperature applications.

Model MMB Mechanical Bridge Plug

Model MMB Tubing Set Bridge Plugs are used to isolate zones for temporary or permanent abandonment. These drillable Bridge Plugs set securely in all standard hardness casing. A ratchet lock ring stores the setting force in the Bridge Plug. The one piece packing element and metal back up rings combine for a superior seal. The case hardened, one piece slips virtually eliminate premature setting, yet can be easily drilled out. They are available for 4½" through 20" casing.

Features:

- Sets securely in most casing
- Ratchet lock rings secure dynamic setting force
- One piece packing element and rocker action metal back up rings combine for a superior seal
- Pressure balanced sleeve valve is opened and closed by tubing manipulation from the surface for better control
- Set with Model MSB Mechanical Setting Tool
- These bridge plugs can be set on standard baker style mechanical setting tools

Model WRBP Wide Range Bridge Plug

Wide Range Wireline Set Bridge Plugs are specially designed to run through tubing or restricted pipe and set securely in larger tubing or casing below. These Bridge Plugs will set securely in any hardness casing. A ratchet lock ring stores the setting force in the Plug. The three piece packing element and metal back up rings combine for a superior seal. The case hardened, one piece slips virtually eliminate premature setting, yet can be easily drilled out. They are available for 1.610" through 5.044" setting range.

Features:

- Sets securely in any hardness casing, including premium grades
- Ratchet lock rings secure dynamic setting force
- Three piece packing element and rocker action metal back up rings combine for a superior seal
- Compact, easy running
- Can be set either with GO, Baker or Gearhart wireline setting tools
- 5.8" sucker rod thread on the bottom shoes to accommodate a centralizer and other tools

Model MWBR Wireline Set Bridge Plug (Retrievable)

Model "MWBR" Wireline Set Retrievable Bridge Plug is a medium performance retrievable bridge plug that is run and set by a wireline pressure setting tool and retrieved by either tubing or sandline. The plug is used for zone isolation, formation fracturing, acidizing, and wellhead repair and can be lubricated in and out of the well under pressure, thereby eliminating snubbing tubing or killing the well. The plug features a balanced equalizing valve located immediately above the three piece multi-hardness packing element system. Caged, bi-directional, one piece slips are located below the packing and firmly anchor the plug against pressure differentials from above or below. The plug is retrieved by ratcheting onto the retrieving neck, picking up four inches to equalize, setting down to uplock, then picking up to remove from well. No rotation is required to retrieve.

Features:

- Compact, fast running, electric wireline set
- Tubing or sandline retrieved - No rotation required
- Balanced equalizing valve opens upwardly which reduces possibility of accidental opening
- Equalizes close to top of packing elements tubing manipulation from the surface for better control
- Field proven design

Hydro-Mechanical Bridge Plugs - HYDRO-MECH

MAP Hydro-Mech Bridge Plug is a hydraulically actuated, mechanically set bridge plug that is designed for easy drillout. It can be used in zonal isolation for squeeze cementing, fracturing, and plug and abandonment applications.

Features:

- The setting mechanism and controls are self-contained eliminating the need for a complex mechanical setting tool
- Eliminates the expense of wireline setting tool and equipment.
- Full tubing bore is available for unobstructed passage of fluids and wireline deployed perforating and logging equipment after the plug is set and tubing released.
- Can be run and set in tandem with retrievable production packers or squeeze packers
- Top equalizing during drill-out assures safe drill-out without the plug coming up the hole due to pressures contained below the plug
- Sets securely in all standard hardness casing

Model MWR Cement Retainer

Model MWR Wireline Set Sleeve Valve Cement Retainers are used for secondary cementing operations. These drillable retainers set securely in all standard hardness casing. A ratchet lock ring stores the setting force in the retainer. The one piece packing element and metal back up rings combine for a superior seal. The case hardened, one piece slips virtually eliminate premature setting, yet can be easily drilled out. They are available for 4½" through 20" casing.

Features:

- Sets securely in any hardness casing
- Ratchet lock rings secure dynamic setting force
- One piece packing element and rocker action metal back up rings combine for a superior seal
- Can be set directly with Baker wireline setting tools
- Shear studs are Baker style and connect directly to the Baker Adjuster Sub
- Can be converted to MMR Mechanical Set Cement Retainer
- Can be converted to Bridge Plugs

*Please contact sales to inquire about high temperature applications.

Model MMR Cement Retainer

The Model MMR Tubing Set Sleeve Valve Cement Retainers are used for secondary cementing operations. These drillable retainers set securely in any hardness casing. The case hardened, one piece slips virtually eliminate premature setting, yet can be easily drilled out. They are available for 4½" through 20" casing.

Features:

- Sets securely in any hardness casing
- Ratchet lock rings secure dynamic setting force
- One piece packing element and metal back up rings combine for a superior seal
- Pressure balanced sleeve valve is opened and closed by tubing manipulation from the surface for better control
- Set with Model MSR Mechanical Setting Tool
- Can be converted to MWR Wireline Set Cement Retainer
- Can be converted to MMB Bridge plug

*Please contact sales to inquire about high temperature applications.

Model MSS Stinger Seal Assembly

The MSS Stinger Seal Assembly is a tubing conveyed latching seal assembly that is used to operate the sleeve valve in an MWR Cement Retainer previously set on wireline. The MSS should always be run in conjunction with a MTC Tubing Centralizer to provide for easier entry in to the Cement retainer.

Features:

- Provide positive control when the work string is picked up to close the sleeve valve
- Re-engages each time the work string is lowered to open sleeve valve
- Helps prevent seal from pumping out during pumping operations or tubing testing
- One size operates several sizes of retainers
- Rotate or Snap-out release
- Can Run with Baker Cement Retainers

Model MTC Tubing Centralizer

Model MTC Tubing Centralizer is used to center the tubing and provide for easier entry into an MWR Cement Retainer previously set by wireline.

Features:

- Provides positive control and allows one size
- Tubing centralizer covers a large range of casing weights
- Most parts are interchangeable with the MSR Mechanical Setting Tool
- Allows tubing torque to be transmitted to tools below
- Can run with Baker Cement Retainers

Our M series CR products can be easily converted to perform as a Slide Valve Cement Retainer, or a Bridge Plug. In addition, all sizes may be converted for electric line setting or mechanical setting by selection of proper upper slip and the appropriate running tools.

Slide Valve Cement Retainer

The Slide Valve Cement Retainer utilizes a slide valve which is pressure balanced in the closed position to reliably contain high fluid pressures, and opens at high pressure differential. Please refer to MWR and MMR for detailed information about Slide Valve Cement Retainers.

Bridge Plugs

A simple inexpensive "bridging plug" is now available in three sizes to convert Slide Valve Cement Retainers (both wireline set and tubing set) to Bridge Plugs. The Bridge Plug is held trapped between shoulders in the retainer body and valve shoe.

Hydraulic Setting Tools

The MAP Model MHSB Hydraulic Setting Tools are used to run and set packers, bridge plugs and cement retainers on a work string, production tubing or coil tubing. After dropping a ball, the setting tool translates hydraulic pressure applied to the tubing to a force transmitted throughout the adapter kit to the slips and pack off the sealing element of these tools. It allows setting in or deviated wells where it is often difficult to use electric wireline equipment. While running in the hole, the setting tool automatically fills with well bore fluid and remains balanced to prevent premature setting. After setting the packer, bridge plug or cement retainer, the coil tubing or tubing string and the setting tool can then be retrieved, while allowing the well bore fluids in the tubing to discharge through bypass ports in the tool.

Features:

- Simple proven operation
- Uses the same adapters for running as are used with a Baker 10# or 20# setting tool
- Automatically fills and drains
- Hydraulically balanced while running in the hole to prevent premature setting
 - Can withstand high tensile loads
 - Two-stage cylinders are standard
 - No rotation required

Model MSB Mechanical Setting Tool

Model MSB Mechanical Setting Tools are used to mechanically set MMB Bridge Plugs. It is designed to contain the upper slips of Bridge Plug in a safe retracted position while running to setting depth. The upper slips are released by right hand rotation and slacking off on the work string.

Features:

- Special designed Bow Spring provide positive control and allows one size Mechanical Setting Tools to cover a large range of casing weight
- Locked with Bridge Plug
- The Upper slips are held in a safe retracted position while running
- Can quickly be configured to set MMR Cement Retainers
- These tools can be used to run a number of Competitive brand Baker style bridge plugs

Model MSR Mechanical Setting Tool

Model MSR Mechanical Setting Tools are used to mechanically set MMR Sleeve Valve Cement Retainers. This tool incorporates both a stinger seal assembly and mechanical setting function. In addition, it has a built in snap latch, allowing the tool to be latched into the cement retainer with set down weight and released with either up strain or right-hand rotation. The sleeve valve on the cement retainer is in the open position while being run in the well. When the setting procedure is completed, the sleeve valve may be closed by picking up two inches at the tools or opened by slacking off two inches. The snap latch feature allows the sleeve valve to be shifted open or closed while the tubing is still anchored to the retainer. Another feature of the tool provides for running the sleeve valve either open or closed. Normally the valve is run open so the tubing may fill. However, for pressure testing the tubing, while running, the valve can be run closed. Cement Retainers can be set and pressure tested in a single trip.

Features:

- Special designed Bow Spring provide positive control and allows one size Mechanical Setting Tools to cover a large range of casing weight
- The upper slips are held in a safe retracted position while running
- Allows users to set, pressure test tubing, and squeeze in a single trip
- Can quickly be configured to set MMR Cement Retainers or MMB Bridge Plugs
- These tools can run standard Baker style plugs or retainers

REPEATA-B RETRIEVABLE PRODUCTION PACKER

REPEATA-B Retrieable Production Packer

Model Repeata-B Retrieable Production Packers are used for production, injection, testing, fracturing, squeeze cementing, gravel packing and as temporary bridge plugs. These wireline set packers are retrievable with tubing, sandline, electric wireline or coil tubing and require no rotation to release or set. The bi-directional one-piece slips hold high pressure differentials from either direction. Repeata-B packers use conventional permanent packer seal nipples and accessories. They are available for 3½" through 9½".

Features:

- Sets securely in all standard hardness casing
- No rotation required to set or release
- Three piece packing element system
- Uses conventional drillable packer seal nipples and accessories
- Threaded pin down connection for easy installation of accessories, such as Screw-Out or Nok-Out Plug kits
- Can be set with GO, Baker or Gearhart Wireline Setting Tools

REPEAT-A-C Retrievable Production Packer

Model Repeat-A-C Retrievable Production Packers feature heavy duty slips that have 25% more contact area with the casing to prevent casing damage and a built in hydraulic cylinder to assure pack off under extreme pressures. Packers are used for production, injection, testing, fracturing, squeeze cementing, gravel packing and are particularly suited as temporary bridge plugs. These electric wireline set packers are retrievable with tubing, sand line, electric wireline or coil tubing. The bi-directional one-piece slips hold high pressure differentials from either direction. Repeat-A-C packers use conventional permanent packer seal nipples and accessories. They are available for 3½" through 9⅝".

Features:

- 25% larger slip area than Repeat-A-B
- Features a built-in Hydraulic Cylinder that intensifies tubing pressure to assure that the tool stays packed under extreme pressure from below
- No rotation required to set or release
- Proven three piece packing element system available in multiple configurations for different applications
- Uses conventional drillable packer seal nipples and accessories
- Threaded pin down connection for easy installation of accessories, such as Screw-Out or Nok-Out Plug kits
- Can be set with GO, Baker or Gearhart Wireline Setting Tools

Model DGL-SI Thermal Production Packer

Model DGL-SI Thermal Production Packers are used on installations requiring premium production equipment for high temperatures and pressures. These wireline set millable packers are available for 2 1/8" through 11 3/4" casing.

Features:

- Sets securely in all standard hardness casing
- Anchor Latch, J-Latch, Snap Latch and locator systems available
- With EPDM Steam Service Trim, temperature rated up to 600 degrees F and pressures up to 1,800 PSI
- With specialized non-steam service trim, temperature ratings up to 450 degrees F and pressures up to 10,000 psi
- Composite proven soft set packing element system
- Ratchet lock rings secure dynamic setting force
- Three piece packing element and rocker action metal back up rings combine for a superior seal
- Threaded pin down connection for easy installation of accessories, such as Screw-Out or Nok-Out Plug kits

Model Repeata-BSI Thermal Production Packer

Model Repeata-BSI Thermal Retrievable Production Packers are used for steam injection, testing, high rate and high temperature gravel packing and well screen applications, as well as temporary bridge plugs. These wireline set packers are retrievable with tubing, sandline, electric wireline or coil tubing and require no rotation to release or set. The bi-directional one-piece slips hold high pressure differentials from either direction. Repeata-BSI packers use conventional permanent packer seal nipples and accessories. They are available for 3½" through 9½".

Features:

- Sets securely in all standard hardness casing
- Anchor Latch, J-Latch, Snap Latch and locator systems available
- With EPDM Steam Service Trim, temperature rated up to 600 degrees F and pressures up to 1,800 PSI
- With specialized non-steam service trim, temperature ratings up to 450 degrees F and pressures up to 10,000 psi
- No rotation required
- Composite proven retrievable soft set packing element system
- Uses Composite Drillable Packer seal nipples and accessories
- Threaded pin down connection for easy installation of accessories, such as Screw-Out or Nok-Out Plug kits
- The new 7" x 4" ID Top Set Repeata BSI packer is ideal for High Tare Gravel pack applications with counter pressure
- Counter acting position and larger slips
- Highly reliable and very popular top retrieving system as in all Repeata packers
- Can be set using most common wireline pressure setting assemblies available from many service companies in conjunction with proper setting adapter kit
- Can also be set with our crossover and hydraulic setting tool or with your own style of crossover if you prefer

Model MAD-1 Tension Packer

Model MAD-1 Tension Packer is a retrievable, tension set packer, designed to hold pressure from below. This economical tension packer is for shallow wells where sufficient set-down weight is not available. This packer is primarily used in water flood, oil production or treating applications. They are available for 4" through 9 $\frac{5}{8}$ " casing. Model MADL-1 Tension Packer is a large-bore version of the Model MAD-L.

Features:

- Short compact design enables easy running procedures, as well as transport
- Bore through the packer is larger than the drift
- Easy to operate J-Slot control
- Rocker type slips
- Proven one piece packing element
- Multiple release methods
- Parts are interchangeable with other manufacturers

MG-1 Retrievable Compression Packer, G-Type

The Model MG-1 Retrievable Compression Packer is a compact, economical set-down packer that can be used by itself for production applications or, with a companion unloader and hold-down, it can be used for well stimulation, testing and other pressuring operations and then left in the well as a production packer.

Features:

- Short compact design enables running procedures, as well as transport
- Permits passage of recording instruments
- Alternate packing element systems
- Simple construction
- Ease of operation
- Alternate body with larger I.D.

Model MR-3D Double Grip Retrievable Packer, R-3 Type

Model MR-3D Double Grip Retrievable Casing Packers are used in production, stimulation and testing applications. Their hydraulic hold down is below the pressure equalization valve. They feature a proven three element packing system and a balance sleeve device to assist in keeping the by-pass closed. They are available for 4½" through 9⅝" casing.

Features:

- Three piece packing element system
- Hydraulic hold down button unit with large internal flow path located below the bypass valve to reduce element swabbing and button wicker dulling
- Surface controlled combination bypass and equalizing valve
- Tubing pressure actuated collet lock to eliminate excessive set down weight requirements
- Parts are interchangeable with other manufacturers
- Field-proven design Carbide rocker slips available

MR-3D
Large Bore

Model MR-3D Large Bore Double Grip Retrievable Packer

Large Bore Model MR-3D Double Grip Retrievable Casing Packers are used in production, stimulation and testing operations where maximum I.D. is required. Their hydraulic hold down is below the pressure equalization valve. They feature a proven three element packing system and a balance sleeve device to assist in keeping the by-pass closed. They are available for 5½" through 7½" casing.

Features:

- Proven three piece packing element system available in multiple configurations for different applications
- Hydraulic hold down button unit with large internal flow path located below the bypass valve to reduce element swabbing and button wicker dulling
- Surface controlled combination bypass and equalizing valve
- Tubing pressure actuated collet lock to eliminate excessive set down weight requirements
- Carbide rocker slips available
- Parts are interchangeable with other manufacturers
- Large bore

Model MR-3S Single Grip Retrievable Packer

Model MR-3 Single Grip Retrievable Casing Packers are used in production as a convention long stroke Packer. They feature a proven three element packing system and a large by-pass area through the Packer. They are available for 4" through 9 5/8" casing.

Features:

- Proven three piece packing element system available in multiple configurations for different applications
- Large by-pass area
- Surface controlled combination bypass and equalizing valve
- Carbide rocker slip available
- Parts are interchangeable with other manufacturers

MAPSET Mechanical Set Retrievable Production Packers

The Model MAPSET single string mechanical Production Packer is a retrievable, double grip compression or tension-set production packer that holds pressure from above or below. Once set the tubing string can be left in tension, compression, or in a neutral position. A large internal bypass reduces the swabbing effect during run-in and retrieval, and closes when the packer is set. When the packer is released, the bypass opens first, allowing the pressure to equalize before the upper slips are pulled from the casing. The Model MAPSET also features an upper slip releasing system that reduces the force required to release the packer. A non-directional slip is released first, making it easier to release other slips. These flexible features allow the MAPSET to be run in a variety of applications ranging from Production Packer to Bridge Plug to Service Packer.

Features

- Internal bypass reduces swabbing
- Holds 7,500 psi high pressure differentials from above or below
- Incorporates standard setting and releasing methods of only one quarter turn to the right
- Tubing string can be held in tension, compression or neutral set while the packer remains engaged
- Optional shear release features available upon request
- Many different elastomers are available for different running requirements
- Bypass valve is below upper slips so the debris is washed from slips when the valve is opened
- Can be configured with Carbide Slips and Drag Blocks for premium casing

MAPSET-HP-Mechanical Set Retrievable Production Packer

The Model MAPSET-HP single string Mechanical Production Packer is a retrievable, double grip compression or tension-set production packer that holds pressure from above or below. Once set, the tubing string can be left in tension, compression, or in a neutral position. A large internal bypass reduces the swabbing effect during run-in and retrieval, and closes when the packer is set. When the packer is released, the bypass opens first, allowing the pressure to equalize before the upper slips are pulled from the casing. The Model MAPSET-HP also features an upper slip releasing system that reduces the force required to release the packer. A non-directional slip is released first, making it easier to release the other slips. These flexible features allow the MAPSET-HP to be run in a variety of applications ranging from Production Packer to Bridge Plug to Service Packer.

Features:

- Internal bypass reduces swabbing
- Holds 10,000 psi high pressure differentials from above or below
- 7,500 psi (7.5K) option for lower pressure applications. See MAPSET
- Only one-quarter right rotation is required to set and release
- Tubing string can be held in tension, compression or neutral set while the packer remains engaged
- Optional shear release features are available upon request
- Packing element options are available for hostile environments
- Bypass valve is below upper slips so the debris is washed from slips when the valve is opened
- Can be configured with Carbide Slips and Drag Blocks for premium casing

Model PHP-2-SR Hydraulic Set Packer

Model PHP-2-SR Retreivable Hydraulic Packers can be run in single or multiple zone installations. It is recommended for deviated wells where conditions are not suitable for mechanical or electric wire packers. No tubing movement is required or generated to set the packer. Once set, the packer is locked in place by one-piece bi-directional slips and will hold high differential pressures. The packer can be released by either straight pull or right-hand tubing rotation. An equalizing and by-pass feature is incorporated in the release mechanism. They are available for 5" through 9 5/8" casing.

Features:

- Recommended for deviated wells
- Tubing pressure actuated
- Proven three piece packing element system available in multiple configurations for different applications
- Straight pull or rotational release
- Bi-directional one-piece slips below the packing

Model Lock-Set Double-Grip Retrievable Packer

The MAP Model Lock-Set Retrievable Casing Packer is a Full Bore Double Grip Retrievable Packer with a built-in pressure equalizing unloader. It holds pressure from above or below. The opposed, non-transferring dovetail slips prevent movement of the packer in either direction, while allowing landing of the tubing in tension, compression, or neutral. It is a general purpose packer for production, injection, zone isolation, or remedial operations.

Features:

- Sets securely in all standard hardness casing
- Internal by-pass
- Opposed dovetail slips for positive set
- Holds pressure from above or below
- Can leave tubing in a tension, compression, or neutral position
- Right-hand rotation sets and releases the packer
- Carbide inserted slips available for higher grade casing
- Converts to Mechanical Bridge Plug with the addition of MAP Model K-Connector Valve

Model MFH Retrievable Double-Grip Hydrostatic Single-string Packer

The Model MFH Retrievable Hydrostatic Packer is used in production, injection and zonal isolation. It can be run in single or multiple zone installations. It is recommended for deviated wells where conditions are not suitable for mechanical or wireline set packers. No tubing movement is required or generated to set the packer. Once set, the packer is locked in place by one-piece no-directional slips. The packer can be released by straight pull. They are available in 4½" through 9½" casing.

Features:

- Hydraulically activated, hydrostatic set
- Contains both a built-in unloader and bypass
- Packoff is mechanically locked and constantly reinforced by hydrostatic pressure
- Proven three piece packing element system available in multiple configurations for different applications
- No mandrel movement during setting allows stacked packer applications
- Simple operation with a straight pull release

MFHL - Hydraulic Set Packer, FHL Type

The Model MFHL Retrievable Double-Grip Large Bore Hydrostatic Single String Packer is a large bore version of the Model MFH Packer. Features, advantages and operational procedures are basically the same as those described for the Model MFH Packer shown in basic unit filed in front of this index tab. Only the information that differs from that shown in the basic unit is contained in this unit.

Features:

- Hydraulically activated, hydrostatic set
- Contains both a built-in unloader and bypass
- Pack-off is mechanically locked and constantly reinforced by hydrostatic pressure
- Proven three piece packing element system available in multiple configurations for different applications
- No mandrel movement required during setting allows for stacked packer applications
- Simple operation with a straight pull release

Model PC-1 Retrievable Packer

Model PC-1 Retrievable Packers are used for a variety of well treating and producing operations including squeeze cementing, formation fracturing, acidizing and testing. The PC-1 is a versatile tension set tool that holds differential pressure from above and below. It has a full opening bore that allows unrestricted fluid flow and easy passage of wireline tools. It is ideal for straddle operations using the Retrievable Bridge Plug. They are available for 3½" through 9⅝" casing.

Features:

- Sets securely in all standard hardness casing
- Full opening bore, thick wall, one piece body
- Three piece packing element system
- Holds differential pressure from above and below
- Used where shallow setting depth prevents use of compression set packers
- Can be used with PCU-1 Unloader
- Field-proven design, recommended to 275 degrees F applications, if need high temp, please contact MAP

Model CS-1 Retrievable Packer

Model CS-1 Retrievable Packers are used for a variety of well treating and producing operations including squeeze cementing, formation fracturing, acidizing and testing. These double-grip, single-string packers have a full opening bore that allows unrestricted fluid flow and easy passage of wireline tools. They also include hydraulically actuated upper button type slips and a built-in pressure relief unloader. They are available for 4½" through 7⅝" casing.

Features:

- Sets securely in all standard hardness casing
- Long carbonized friction pads act independent of slips and allow trouble free passage through collar and recesses and stage tool profiles
- Full opening bore, thick wall, one piece body
- Three piece packing element system
- Hydraulic hold down
- Surface controlled pressure equalization valve that requires no separate unloader

JS[®]-2A Retrievable Packers

Retrievable Service Packer Model JS[®]-2A (with P110 Body, Coupling, Sub and Carbide Slips, Drag Blocks)

Model JS[®]-2A Retrievable Packers are used in stimulation, perforating, gravel packing and testing applications. The hydraulic hold down is below the pressure equalization valve. The tool features a proven three element packing system and a hydraulically controlled balance piston designed to keep the by-pass closed when set. The tools are available in a 4½" through 16" casing.

Features:

- Sets securely in all standard hardness casing
- Three piece packing element system with metal backups accommodate low and high pressure applications for the broadest range of service
- Hydraulic hold down button unit with large internal flow path located below the bypass valve to reduce element swabbing and button wicker dulling. These hold down piston type slips are set by pressure from below
- Surface controlled combination bypass and equalizing valve
- Tubing pressure actuated hydraulic piston eliminate excessive set down weight requirements. This feature is far more efficient than collet type locking systems
- Automatic Jay Unit, setting the packer is accomplished by running to depth, picking up a few feet rotating ¾ turns to the right and setting down

- Straight pickup of the tubing will first open the bypass valve and equalize pressure, continued pickup will release the packer and automatically engage the packer in the running position for further operations up or down the hole
- All JS®-2A packers come with heavy duty long acme threads and dual O-Ring Backups on the body to coupling connections
- All JS®-2A packers come standard with 8 Round top and bottom connections. For API IF connections see our JS®-3 packers. For other premium threads please contact sales
- Carbide slips, pistons and friction pads for high hardness casing
- P110 body coupling and sub for heavy duty jobs

MSV-2

“MSV-2” STORM VALVE

Model MSV-2 Storm Valve

The Storm Valve is a combination Back Pressure Valve and Safety Joint that is run above a JS®-3 Storm Packer, in order to provide well control protection during a temporary abandonment of the well, without having to pull the drill pipe. The Storm Valve allows the packers to be set and then permits disconnection and retrieval of the drill pipe and the upper sub of the valve, while at the same time automatically closing the Storm Valve, isolating the drill pipe below the Storm Packer.

Features:

- Can be easily run by rotating the tubing string which can open and close the valve
- In emergency situation, the plug can open the drill pipe passage
- It is designed to be used with right hand set compression type packers only

Model MTXT Retrievable Service Packer

Model MTXT Service Packer is a 1/4 turn, compression set, retrievable packer that is capable of holding high pressure from above and below.

It is used for acidizing, fracturing, cementing, and casing pressure tests.

Features:

- Full opening packer bore.
- Hydraulic hold down pistons for pressure from below.
- Built in unloader system.
- Large by-pass area.
- Left hand manual jay is standard.
- Other jay systems are available.
- Internal latch mechanism allows circulation at high rates of speed.
- Carbide slips, pistons and drag blocks for high hardness casing.

Model "TAC-B" Tubing Anchor Catcher

The MAP Model TAC-B Tubing Anchor acts as a tubing anchor to maintain tension in the tubing string during the pump cycle and as a tubing catcher to prevent parted pipe from falling into the well. It is used in most rod pumping applications where it is important to maintain the tubing tension.

Features:

- Increases pump efficiency
- Reduces operating costs by reducing maintenance and down time caused by casing, tubing or sucker rod wear
- Rotates left to set, right to release
- Straight pull emergency release
- Parts interchangeable with other manufactures
- Available with Right Hand Set

Model MKV-1 K-Connector Valve

The MAP MKV-1 K-Connector Valve or K-Valve is a valve that converts the Lock-Set Retrievable Packer or MAPSET Retrievable Packer into a Retrievable Bridge Plug. The valve can be used at any time to create temporary zonal isolation when testing, squeezing or treating the wellbore, as well as when performing any work on the well head. The valve allows pressure to be equalized above and below the packer prior to releasing.

Model H Unloader - Compression Activated Unloader

The Model H Compression Unloader is used with set down type packers for equalizing tubing and annulus pressures. Pressure is contained by three extra-large O-ring type seals which withstand repeated cycles of unloading and equalizing.

The unloader is manufactured in either a jay slot configuration or straight slot configuration. Both configurations provide means of transmitting torque through the unloader to ready the companion packer for setting. The straight slot unloader is closed by direct set down weight and opened by direct pick up on the work string. The jay slot unloader is closed by picking up, rotating one quarter turn to the right, then setting down. After setting down, the tubing can be rotated one quarter turn to the left, if desired, to lock the unloader closed. To open the unloader, use the reverse order mentioned above.

Features:

- Unloads pressures from either above annulus or tubing
- Multiple acting
- Can be locked in the closed or open position
- Simple operation

Model PCU-1 Unloader - Tension Activated Unloader

Model PCU-1 Upstrain Uploader is designed to equalize tubing and annulus pressures above a tension packer.

The unloader is made up directly above the tension packer and is usually run in the hole in the open position to allow fluid bypass through tension packer and into the annulus. Torque is transmitted through the unloader to the tension packer by a key located in a key slot of the unloader body. Applying upstrain to set the packer will close the unloader and setting down weight will open it.

Features:

- Unloads pressures from either direction
- Multiple acting. May be run in either open or closed position and then opened to closed as many times as required
- Full opening bore through tool
- Easy operation, set down weight to open and apply upstrain to close

Model CSU-1 Tubing Tester

Model CSU-1 Upstrain Tubing Tester is normally attached directly above a Model CS-1 Squeeze Packer, or any other model of weight set type packer. This valve is used to test tubing for leaks once the packer is set and to displace tubing fluid when performing a squeeze, stimulation, or injection operation.

Features:

- Pressure test tubing prior to remedy of well
- Can also be used to pressure test tubing while running tubing string into well
- Used to displace fluids while squeezing, stimulation, or treating
- For use with any retrievable set-down type squeeze packer
- Will handle differential pressures from tubing or above annulus favors
- Easy to operate

"C" TYPE SUR-GRIP VISE

The Sur-Grip Vise is a heavy duty screw-type vise designed for holding pipe, valves, fittings, or just about anything within the capacity of its positive grip jaws.

Equipment may be placed in the versatile Sur-Grip from any of three sides with the fourth side acting as a positioning and steadying guide. The unit's easy rotating handle quickly extends at arm height for extra leverage for critical tightening applications. The Sur-Grip Vise is available in sizes 2"~13 $\frac{3}{8}$ ".

Outer Dimension: 72.83 in. (length) x 27.56 in. (width) x 55.12 in. (height)

Part Number: 041-1000-370 (up to 9 $\frac{5}{8}$ ")

Model MT-2 On-Off Tool

The Model MT-2 On-Off Tool is a left-hand release, tubing disconnect device with an internal lock profile for securing flow control equipment. It is used in operations that require tubing disconnect and reengagement without releasing the packer. The internal lock profile is used to retain flow control devices such as plugs, valves or chokes.

Features:

- ¼ turn Left-hand release, auto-on
- Optional right-hand release
- Bonded seals allow multiple disconnects
- Can be pinned in a shear-up or shear-down position
- Type MX internal lock profiles are standard

Model MX Landing Nipple

The "MX" Nipple offers an expanded versatility to downhole selection. Any desired number of "MX" Nipple can be placed in the production string, thereby offering an unlimited number of positions for setting and locking surface controls. May be used in the following applications:

- Land blanking plugs to shut in well or test the production tubing
- Land velocity type safety valves
- Land equalizing check valves
- Land chokes to reduce surface flowing pressures
- Land instrument hangers with geophysical devices such as pressure and temperature recorders

Features

- Versatility to reduce completion and production costs
- Nipple bore compatible with tubing size and weight to permit flow capacity
- Designed for standard tubing weight
- All premium threads available

Model MXN Landing Nipple

"MXN" Nipple is designed for use in single nipple installations or as the bottom nipple when placed in a series of type "MX" landing nipples. "MXN" Nipple can be used in the above applications as "MX", except that, it has restricted I.D. catches tools dropping during wireline work.

Features

- Full-opening packing bore, with a locking recess at the top of the

Model MF & MR Landing Nipples

The "MF" Nipple is a top NO-GO or selective nipple which provides for the location of various wireline flow control devices in the production string. Be sure to consider carefully the location and number of the model "MF" seating nipple to provide maximum versatility in the positioning of the various flow control accessories. Model "MF" nipple may be used in the following applications:

- Land blanking plugs to shut in well or test the production tubing
- Land velocity type safety valves
- Land equalizing check valves
- Land chokes to reduce surface flowing pressures
- Land instrument hangers with geophysical such as pressure and temperature recorders.

Features of Model MF Landing Nipple

- Accept selective or top NO-GO locks
- Honed internal sealing bore for maximum sealing capacities
- Locking groove/no-go shoulder combination above seal bore
- All premium threads available

The "MR" Nipple is a bottom NO-GO seating nipple which allows for location of various flow control devices in the production string. "MR" Nipple can be used in the above applications and has restricted I.D. catches tools dropping out of the tubing and being lost

Model MXO & MXA Circulating Sleeve

The "MXO" circulating sleeve is a downhole flow control device mounted in the production tubing. It effectively controls the flow between the tubing and the casing annulus by means of internal sleeve that is opened and closed by standard wireline methods.

Features:

- Dependable, simple, quick
- Features a nipple profile above and a packing bore above and below the communication ports
- Ports can be closed without leaving any obstructions in the tubing once the shifting operation is completed
- The Model "B" shifting tool is used to open (jarring down) or close (jarring up) the "MXO" circulating sleeve
- All premium threads available

“MXA” Circulating Sleeve

“MXA” circulating sleeve is a downhole flow control device as the “MXO” circulating sleeve. The difference is that the model “B” shifting tool is used to open (jarring up) or close (jarring down) the “MXO” circulating sleeve.

“MXD” Circulating Sleeve

“MXD” circulating sleeve is a downhole flow control device as the “MXO” circulating sleeve. The difference is that it has a larger communication port area than “MXO” circulating sleeve.

Model ML Circulating Sleeve

"ML" Circulating Sleeve is a downhole flow control device mounted in the production tubing to provide communication between the tubing and casing annulus.

Features:

- Dependable, simple, quick
- Features a nipple profile above and a packing bore above and below the communication ports
- Ports can be closed without leaving any obstructions in the tubing once the shifting operation is completed
- The Model "D-2" Shifting Tool is used to open (jarring down) the "ML" Circulating Sleeve
- All premium threads available

Model MPX Plug

MPX plug is a selective device capable of holding pressure differentials from above or below when set at any "MX" profile nipple of the same size. Available in L-80 and 9 Chrome materials.

MPX SPECIFICATION GUIDE			
Profile Size (in./mm)	1.875 45.90	2.313 58.74	2.750 69.85
Max OD (in./mm)	1.875 47.50	2.307 58.60	2.750 69.85

Model MPXN Plug

MPXN plug is non-selective device capable of holding pressure differentials from above or below when set at any MXN profile nipple of the same size. Available in L-80 and 9-Chrome materials.

MPXN SPECIFICATION GUIDE			
Profile Size (in./mm)	1.875 47.63	2.313 58.75	2.750 69.85
Max OD (in./mm)	1.875 47.50	2.307 58.60	2.750 69.85

Model MFWG Bypass Blanking Plug

The Model MFWG Bypass Blanking Plug is a Top NO-GO wireline retrievable tubing plug, which can be landing in the matched "MF" Landing Nipple. It is designed with a Removable Mandrel for equalizing pressures. The Removable Mandrel is held in the Bypass position by the running tool, to allow fluid Bypass when landing in the seating nipple. When the plug is locked into the desired Seating Nipple, the Removable Mandrel is shifted and locked to close the Bypass Ports. To equalize, a standard wireline pulling tool latches on to and retrieves the Removable Mandrel. After the pressures have been equalized through the Bypass Ports, the plug may be retrieved with a standard pulling tool and proper probe.

Model MRZG Bypass Blanking Plug

The Model MRZG Bypass Blanking Plug is a Bottom NO-GO wireline retrievable plug. It can be landing in the "MR" Landing Nipple. It's working theory and operating is same as the model "MFWG" Bypass Blanking Plug.

Model MD-2 Shifting Tool

The Model MD-2 Shifting Tool is a wireline operated tool used to open and close the Model "ML" Circulating Sleeve. Any number of sleeves, of the same size, in a single tubing string can be shifted in any combination or in any sequence.

Features:

- The Automatic Locating Collet. On the tool positively notifies the operator when the desired sleeve is reached. Running through two consecutive seal bores located two feet apart, indicates a sleeve
- Running through only one seal bore indicates a landing nipple
- Proof of Sleeve Shift. After completing a shift, an attempt to repeat the operation will give a surface indication that the shift was performed
- Safety Release. If the sleeve is opened in the presence of a differential pressure in favor of the annulus, the release mechanism is held inoperative by flow until the pressures equalize
- Emergency Release. The Shifting Tool has a shear pin release mechanism below the shifting Dogs for emergency release
- Deliberate Release. Even after the Shifting Tool is seated in a sleeve, it can be released without shifting the sleeve
- Open/Close Sequence. Upward jarring opens the sleeve. This allows the use of Hydraulic or Mechanical jars. Run in the inverted position, the tool will close the sleeve with downward jarring
- At least 6 feet, without restrictions, should be provided below the sleeve

“MBS” & “MBP” SHIFTING TOOL

MODEL MBS & MBP SHIFTING TOOL

The Model “MB” Shifting Tool is a wireline operated tool used to open and close the circulating sleeve.

The Model “MBS” Shifting Tool has selective keys, which require you to shear the pin in the shifting tool before releasing. After the tool is released, it will not engage any more sleeves.

The model "MBP" Shifting Tool has positive keys, which can be self-release from the sleeve after shifting. After the tool is released, they also can engage sleeve traveled in the hole.

Features:

- Dependable, simple, quick
- Features a nipple profile above and a packing bore above and below the communication ports
- Ports can be closed without leaving any obstructions in the tubing once the shifting operation is completed
- The Model "D-2" Shifting Tool is used to open (jarring down) the "ML" Circulating Sleeve
- All premium threads available
